

ULTRASOUND CAPABILITY STATEMENT

Core Competencies

Ultrasound Systems: Conquest Imaging offers fully reconditioned ultrasound systems manufactured by General Electric, Siemens and Philips for a fraction of the cost of new. From the most contemporary to more "seasoned" equipment, there is no better value than Conquest Imaging. A free on-site consultation is provided to ensure all your staff – and patient's needs are satisfied.

InService-InHouse™: Larger ultrasound healthcare providers consider the business case for bringing ultrasound service back in-house, but balk at such an undertaking. Through our InService-InHouse™ program, Conquest Imaging has assisted many health care providers in navigating the complexities of implementation. In the end, productivity and savings increase significantly, as does the department's patient satisfaction. It's a win for all.

Service/Preventative Maintenance: Conquest Imaging is dedicated to partnering with health care providers to maintain the maximum uptime and lowest cost of ownership while maintaining your ACR-compliant status. Our dedicated service engineers are trained on all major makes and models and are equipped to complete repairs as quickly as possible. By adhering to our First Time Fix© philosophy, the percentage of repairs completed on the first visit are the highest in the industry. Conquest Imaging offers five tiers of service in our Customer Care and Preventive Maintenance Plans.

Training: Conquest Imaging takes ultrasound service training very seriously and have dedicated a large portion of our corporate headquarters as a state-of-the-art service training facility. Check out this year's training schedule to see just how you can expand your ultrasound knowledge base and increase your technical service skills. AAMI Re-Certification points – The ACI recertification program requires at least 15 activity points be accumulated in activities directly related to the HTM field. Conquest Imaging's Ultrasound Classes earn certified CBETs 0.5 points per day towards your triennial recertification.

Parts and Probes: Conquest Imaging delivers nothing short of factory-grade quality with ultrasound products that meet or exceed
